

fo.q CP-02

The CP-02 carbon spacer is the ultimate in spacers for use with players and amps, featuring a cutting-edge material that combines organic polymer hybrid vibration-damping sheets and high-grade carbon fiber reinforced plastics.

It effectively absorbs tiny unnecessary vibrations in the equipment, eliminating muddiness and distortion from the sound to produce a clear, translucent sound quality.

The adhesive damping spacers provided as an accessory can be affixed in any preferred locations. In addition to damping vibrations, they also serve to keep equipment firmly in place.

Product specifications

Uses	large-sized speakers and amps
Size	20 x 20 mm; thickness: 2.5 mm
Load Resistance	100kg/spacer
Quantity	8 spacers
Accessories	16 adhesive damping sheets; thickness: 0.3 mm
